ELECTRIC JACKET

SY·CV60

WELCOME

Dear Customer,
Welcome to Sytech! Thank you for purchasing the Electric Heating Jacket SY-CV60. Please read this manual carefully before operating your product and pay close attention to the precautions which are mentioned below. Store this user manual in a safe place for future reference. We are sure that this new Electric Heating Jacket will satisfy your needs.

BASIC SAFETY GUIDELINES:

- Only use this appliance as described in these instructions.
- This device is not intended to be used by anybody (including children) with reduced physical, sensory or mental abilities or by anybody without the necessary experience or knowledge, unless they are supervised or given instructions beforehand on how to use the device by somebody responsible for their safety. Children should be supervised to make sure they do not use the device as a toy.
- Do not use accessories that have not been recommended or that are not provided with the device.
- If the power lead is damaged, it should be replaced with a special or similar lead available from the manufacturer or its after-sales representative.
- Do not use this device if the plug is damaged, if the unit is not working, if it has been dropped or if it is damaged or has been dropped in water. If any of these things happens, take the device to your supplier or its after-sales department to be examined and repaired.
- Do not carry this device by its power lead or use the lead as a handle.
- Always unplug the device after use or before cleaning.
- If the device falls into water, unplug immediately before taking it out of the water.
- An electrical appliance should never be left plugged in unattended. Unplug it when not in use.
- Only use your heating jacket with the power supply provided.
- Do not bend the power lead and do not use the heating jacket when it is folded, rolled up or creased.
- Never use this appliance in a room where aerosol products (sprays) are used, or in a room where oxygen is administered.
- To unplug, make sure the button is in the “Off” position and then remove the plug from the socket.
- Do not use safety pins, do not scratch the heating jacket with a sharp object and avoid any impact with blunt objects. Do not secure the device with pins or any other metal objects. Never let anything fall into and do not insert anything into any of the openings.
- Do not expose your heating jacket to the sun and do not iron. This could damage the insulation of the electrical circuit.
- This device is intended for home use and not for use in a hospital environment.
- Do not use this jacket with other heating equipment or to heat up other items (hot water bottle, electric jacket etc.).
- If you are concerned about your health, consult a doctor before using this device.
- If you feel any pain when using this device, stop using it immediately and consult your doctor.
- Never let this device come into contact with any part of your body that is swollen, inflamed or covered by a rash.
- The remote control should be within reach at all times. Do not leave it concealed under a pillow or any other object.
- Do not wash the jacket too often as this could cause damage. It should not be washed in a washing machine more than 5 times during its lifetime.
- Do not use the device when damp and do not switch it on to dry.
- When you are storing your jacket for a long time, keep it in a dry place. Check its condition carefully before using it again. If the power lead seems to be damaged, do not use the device.
- This device should not be used by young children, anybody insensitive to heat or on animals.

USING THE ELECTRIC JACKET SY-CV60

Diagram & description:

1) 2 Levels of heat to select from
2) LED indicator

How the SY-CV60 works:

- Plug your heating jacket into a power supply. Set the On/Off button to the “On” position.
- The jacket will start to warm up. To preheat your jacket properly, we recommend selecting the highest heat level for the first 10 minutes. The temperature will gradually rise.
- After it has warmed up, put on your heating jacket and choose the heat level you want.
- To turn off, move the button to the “Off” position.

N.B.: The heating jacket is designed to stay on for a non-stop period of ninety minutes. If you would like to use it for longer, it is a good idea to let it cool down for 15 minutes before using it again.

CLEANING AND MAINTENANCE

When you are not using the heating jacket and before you clean it, please follow these instructions:
- Make sure that the remote control is in the “Off” position.
- Unplug from the power supply.
- Let the jacket cool down before cleaning.

Small stains can be cleaned with a cloth or a damp sponge, and possibly with a small amount of washing liquid for delicate fabrics.
Caution: do not dry clean the jacket, wring it out, dry it in a tumble dryer or a mangle and do not iron.
The cover of the heating jacket can be washed in a washing machine. Use a cycle for delicate fabrics at 30°C. Use a washing product for delicate fabrics and use the amount recommended by the manufacturer.
Do not wash the jacket too often as this could cause damage. It should not be washed in a washing machine more than 5 times during its lifetime.
To dry, do not hang up using clothing pegs or any other items.
Do not expose to sources of heat such as the sun, radiators etc.
N.B.: Under no circumstances should you switch the jacket on to dry it.

STORAGE

If you are not going to use the jacket for a long time we would recommend storing it in its original packaging in a dry place and without anything on top of it.
